Surenthar

"'Build a python code, assume u get temp and humidity values
(generated with random function to a variable) and write a
condition to continuously detect alarm in
case of high temperature"

```python
#temprature searching
while(gate):
    temperature = random.randint(0,50)
    humidity = random.randint(10,50)

    if temperature>45 and humidity<50:
        print("Temperature =",temperature,"Humidity =",humidity)
        print("Alert message in Activate")

        gate=False
    else:
        print("Temperature =",temperature,"Humidity",humidity)
    sleep(1);
```
